

BEYOND ILLUSION

Presented By Team
T7_FIT1055RRAH

DEEPFAKES DESTROY TRUST, BEYONDILLUSION RESTORES IT.

Deepfakes are sexual 90 per cent of the time,
and nearly all the targets are women.

- Deepfake is a type of technology that creates fake and yet believable videos, voices, and images, which undermine the credibility of the population.
- From the DeepNude app to the Zelensky surrender video, victims lose dignity, privacy, and credibility.
- Seeing is believing - the basis of truth itself is in danger.

THE CRISIS

- By 2025, the number of deepfakes that spread is projected to be 8 million.
- Deepfake porn victims are 99% women and 94% in entertainment.
- Fraud and impersonation: €220 000 CEO voice clone scam in the UK; USD 25 million Hong Kong CFO video fraud.
- Fake politics: Zelensky's surrender video is a psychological weapon during war.
- Children & students find it hard to notice deepfakes, which leads to them being more prone to grooming and cyber-abuse.
- Companies lose money and fame.
- Journalists/media stand the risk of publishing fake news and losing credibility.
- The society as a whole: truth and democracy wither.

WHY CURRENT SOLUTIONS FAIL

- Reactive, not proactive: The majority of tools react to harm, not prevent it in real-time.
- Lack of transparency: The users are presented with fake/real labels with no indication of how confidence was obtained.
- Prejudice in datasets: Models that have been trained primarily on Western male faces
- Privacy threats: Some detectors save raw media without permission or sufficient encryption.
- Lack of human feedback loop: The outcomes cannot be challenged or even reviewed in order to foster trust and learning abilities.
- Arms race: Developed deepfake-generating models are improving faster than detectors; current solutions are weeks behind.

FROM UPLOAD TO ACTION -THE JOURNEY

Every BeyondIllusion interaction follows an ethical journey: Upload → Detect → Report → Verify

Upload: User uploads suspicious media

- Consent & Privacy (Deontology)

Detect: AI model analyses content

- Transparency & Honesty (Virtue)

Report: User views results, chooses action

- Public Good & Accountability (Utilitarian)

Verify: Generates an evidence PDF or confirmation

- Trust & Integrity (Virtue)

The screenshot displays the BeyondIllusion web interface, which is organized into three main vertical panels: Upload, Detect, and Report.

- Top Summary Bar:** Shows overall statistics: "Files Scanned 247" (with an eye icon), "Authentic 231" (with a green checkmark icon), and "Deepfakes 16" (with a red X icon).
- Upload Panel:** Features an "Upload" header with an upload icon. Below it is a dashed box with the text "Drop file or click" and "Upload only media you have rights to analyse." A blue button labeled "Choose File" is present. There is also a "Quick Scan URL" section with a text input field labeled "Paste image URL...". At the bottom, it lists "Supported formats: JPG, PNG, MP4, MOV".
- Detect Panel:** Features a "Detect" header with a shield icon. It shows a green box indicating "Authentic" with a "Confidence: 96.8%". Below this are three progress bars: "Facial markers" at 98%, "Audio consistency" at 95%, and "Metadata integrity" at 97%. A "View Details" button is at the bottom.
- Report Panel:** Features a "Report" header with a warning icon. It includes a yellow box asking "Spot a deepfake? Help us improve detection accuracy". Below this are dropdown menus for "Issue Type" (set to "Face swap") and "Severity" (set to "Medium"). There is a "Notes" section with a text input field labeled "Describe the issue...". A prominent red button labeled "Submit Report" is at the bottom, with a note below it stating "Reports are reviewed within 24 hours".

ETHICAL REASONING PSEUDOCODE

CORE DEONTOLOGICAL RULES
(ABSOLUTE CONSTRAINTS)

R1 – CONSENT_REQUIRED	No media processed without explicit consent
R2 – IDENTITY_DISCLOSURE	System always discloses AI as non-human agent
R3 – PRIVACY_PROTECTED	Never store raw media data
R4 – NO_IMPERSONATION	System may not fake human voices/faces
R5 – SAFETY_PRIORITY	Flag harmful/manipulative content immediately

ETHICAL REASONING PSEUDOCODE

VIRTUE ETHICS CHARACTER TRAITS

COMPASSION

Empathetic language

HONESTY

Transparent confidence scores

RESPONSIBILITY

Feedback + report channels

KINDNESS

Soft blue/green UI, gentle tone

WISDOM

Balance accuracy with privacy impact

ETHICAL PSEUDOCODE

BeyndIllusion's logic operationalises ethics rules, guides behaviour, and prioritises public good.

ACM Codes:

1.2 Avoid Harm

1.3 Honesty

1.4 Fairness

1.6 Privacy

3.1 Public Good

```
def BeyondIllusion_Detection(user, media):
    # Deontological Checkpoints
    if not user.has_provided_consent():
        return "Consent required"          # R1
    display("AI-assisted analysis active")  # R2
    store_metadata_only(hash(media))        # R3

    # Utilitarian Logic
    harm = risk_assessment(media)
    detection_result = detector.analyze(media)
    harm_risk = detection_result.confidence_score()
    if harm_risk > 0.8:
        PRIORITIZE immediate_analysis()
    else:
        SCHEDULE standard_analysis()

    # Virtue Ethics
    if harm_risk >= 0.9:
        ui.message("Deepfake likely. PLease verify before sharing.") # HONESTY
        ui.offer("Report / Generate Evidence PDF") # RESPONSIBILTY
    elif harm_risk >= 0.7:
        ui.message("Uncertain result. A human review is recommended.") # WISDOM
    else:
        ui.message("Authentic with high confidence. Share responsibly.") # KINDNESS

    ui.footer_note("Thank you for using BeyondIllusion. Promoting digital trust together.") # COMPASSION

    log.entry({
        "user": hash(user.id),
        "media_hash": hash(media),
        "result": detection_result.label,
        "public_benefit_score": benefit_calculator(harm_risk, confidence)
    })
END FUNCTION
```

PROTOTYPE INTERFACE

Files Scanned
247

Authentic
231

Deepfakes
16

Upload

Drop file

or click

Choose File

Upload only media you have rights to analyse.

Quick Scan URL

Paste image URL...

Supported formats:

JPG

PNG

MP4

MOV

Detect

Upload a file to begin deepfake detection analysis.

Our AI analyzes:

- Facial markers and inconsistencies
- Audio-visual synchronization
- Metadata integrity checks

Report

Spot a deepfake?

Help us improve detection accuracy

After detection, you can submit detailed reports about suspected deepfakes.

Reports are reviewed within 24 hours

BEYONDILLUSION – WHY IS IT BETTER?

- **Real-Time Detection:** Predicts manipulated media in seconds by a hybrid vision audio model.
- **Consent Gate:** There is no analysis without user permission to fully comply with ACM Code 1.2- Avoid Harm.
- **Explainable Results:** Shows confidence scores, heat maps and plain language logic behind each detection.
- **Fairness Audit:** Trained and bias-tested on gender and ethnicity data.
- **Report & Verify Portal:** This will enable the user to flag, review, and generate evidence PDFs to be further acted upon.
- **Privacy first storage:** No media is stored at all; the metadata is hashed only.

BEYOND ILLUSION - WHY IS IT BETTER?

- **Tri-Framework Alignment:**
 - a. Deontology → protects consent, privacy, and identity disclosure.
 - b. Virtue Ethics → ensures tone, honesty, and empathy in user experience.
 - c. Utilitarianism → maximises public good by prioritising high-impact detection.
- **Transparent & Explainable:** Users see how each result was generated.
- **Accountability by Design:** Logs, fairness audits, and review options uphold ACM Code standards.
- **Ethical Differentiation:** Competing systems focus on accuracy alone; TruthGuard builds trust through integrity.

COMPETITIVE ADVANTAGE

BeyondIllusion outperforms competitors by being ethical, explainable, and scalable.

Factor	Typical Detector	BeyondIllusion
Consent & Privacy	Often ignored	Mandatory consent gate + metadata-only storage
Transparency	Binary “Real/Fake” output	Explainable confidence score
Fairness	Limited demographic testing	Multi-gender, multi-ethnic audit
User Empowerment	No feedback loop	Built-in report + evidence generator
Tone	Robotic or punitive	Compassionate, educational tone

BEYONDILLUSION – IMPACT POTENTIAL

- **Direct Benefits:** Protects individuals from impersonation, harassment, and reputational harm.
- **Societal Impact:** Reduces misinformation spread; supports safe journalism and civic trust.
- **Educational Value:** Teaches users to recognise deepfakes responsibly, promoting AI literacy.
- **Scalable Partnerships:** Can integrate with universities, media outlets, and social platforms.

TIMELINE

Phase 1 – Pilot (Now)	University launch	Academic + student journalist testing
Phase 2 – Expansion (6–12 mo)	Media partnership	Integrate plugin with news verification portals
Phase 3 – Enterprise (Year 2)	API for platforms	Collaborate with Meta / X / TikTok moderation
Phase 4 – Policy Collaboration	AI Ethics Standards	Inform national AI transparency frameworks

THANK YOU
**BUILDING ETHICAL AI,
ONE CLICK AT A TIME.**
